**Standard equipment:** Standard rubber base, spring base,

spring base adjustment, delivery roller, transmission, rims and tyres

**Optional equipment:** Agitator, drawbar w. eye or ball

bearing, three-point suspension, fitting for fork-lift truck, lights, electronic remote control and cover.

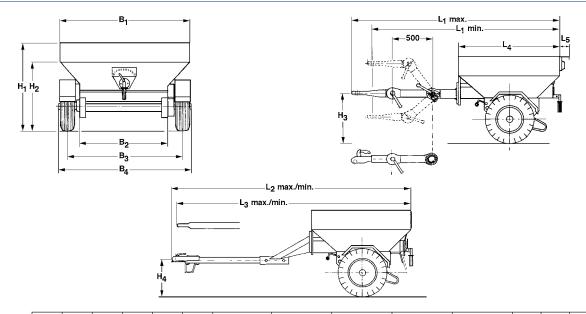

## **Features:**

Stepless adjustment of the spreading flow. This means that the spreader can be set to deliver as little as possible but as much as necessary.

The ITM spreader may deliver sand, abrasive, urea, oil absorbers and other common spreading materials and combinations of these.

All models may be fitted with the Epoke dosing system, featuring an agitator, which prevents material bridge building and the delivery roller ensures accurate and even delivery over the entire spreading area.

Like all other Epoke machines, ITM features surface treatment consisting of sandblasting, zinc dust priming, 2-component polyurethane base coat and a 2-component top coat.
